Ethan Lai

**FUND STATISTICS**

|                    |       |
|--------------------|-------|
| Effective Duration | 2.05  |
| Current Yield      | 3.33% |
| Yield To Worst     | 3.03% |

Effective duration provides a measure of a fund's interest-rate sensitivity. The longer a fund's duration the more sensitive the fund is to shifts in interest rates. Current Yield and Yield to Worst of the underlying holdings of the fund do not account for any fees.

**RISK METRICS\***

|                        | Fund**  | Peers* |
|------------------------|---------|--------|
| Sharpe Ratio           | 0.65    | (1.32) |
| Sortino Ratio          | 1.09    | (1.32) |
| Standard Deviation     | 1.23    | 0.91   |
| Upside Capture Ratio   | 21.98   | 21.95  |
| Downside Capture Ratio | (41.73) | 80.68  |

\* All risk metrics above are measured on a 1 year basis and measured against the US Barclays Aggregate Bond Index.

\*\* Institutional Share Class.

Peers are defined as the Fund's Morningstar Category.

**30-DAY SEC YIELDS**

|           |       |             |       |
|-----------|-------|-------------|-------|
| A Shares: | 2.07% | I Shares:   | 2.60% |
| C Shares: | 1.59% | Inv Shares: | 2.09% |

The 30-Day SEC Yield is computed under an SEC standardized formula based on net income earned over the past 30 days.

**EXPENSE RATIOS**

|           |       |             |       |
|-----------|-------|-------------|-------|
| A Shares: | 1.65% | I Shares:   | 1.16% |
| C Shares: | 2.16% | Inv Shares: | 1.66% |

Ratios listed are as of the 9/27/18 prospectus.

**Sharpe Ratio:** Average return earned in excess of the risk-free rate per unit of volatility or total risk. Subtracting the risk-free rate from the mean return, the performance associated with risk-taking activities can be isolated.

**Sortino Ratio:** Measures the risk-adjusted return of an investment asset, portfolio, or strategy. It is a modification of the Sharpe ratio but penalizes only those returns falling below a user-specified target or required rate of return, while the Sharpe ratio penalizes both upside and downside volatility equally.

**Standard Deviation** Known as historical volatility and is used by investors as a gauge for the amount of expected volatility.

**Upside Capture Ratio:** Statistical measure of an investment manager's overall performance in up-markets. The up-market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen.

**Downside Capture Ratio:** Statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped.

An upside capture ratio over 100 indicates a fund has generally outperformed the benchmark during periods of positive returns for the benchmark. Meanwhile, a downside capture ratio of less than 100 indicates that a fund has lost less than its benchmark in periods when the benchmark has been in the red. A negative downside capture indicates the fund has gained when its benchmark has been in the red. All bond funds' ratios are calculated relative to the Barclays Capital U.S. Aggregate Bond Index.

**A short duration bond fund that gives investors exposure across multiple fixed income sectors and a focus on low duration.**

Launched in 2005, Leader Short Duration Bond Fund has focused on maximizing total return potential through the ups and downs of bond market cycles, while maintaining a low overall duration. The Fund holds a diversified portfolio of bonds across various fixed income sectors that is actively managed to maximize return and generate a high level of income.

**A Broader Opportunity Set:** The fund invests in a diversified portfolio of short duration, investment-grade, money market and other fixed income securities.

**Opportunistic Approach:** The Fund's experienced managers look for strategic entry points across asset classes and single securities.

**Higher Income Potential:** Access to a wider range of income opportunities means the fund may offer higher income potential than other short-term investments.

**Market & Fund Commentary**

Equity markets continued their intense sell off into December alongside high yield credit with only some relief and the last few days of the year. Trade wars and fears of a global slowdown looked to be the main drivers. It seems that the market is pricing in a deterioration of fundamentals, which will make the next earnings season interesting. Key technical levels across the major indices were lost and approached bear market territory. After November, we began accelerating our defensive posture across all our funds.

High Yield Credit spreads continued steep widening over December from November alongside the equity markets sell off (+57bps). Investment Grade spreads also continued moving wider (+12bps). Treasuries yields finally tightened only slightly during the course of December, with the yield curve flattening. The Federal Reserve hiked in December as expected and left room for 2 more hike in 2019. It seems though as if the market is pricing in a pause come March 2019, which would explain the yields across the curve falling. We still find certain floating rate bonds attractive to take advantage of rates on the front end of the curve while yields remain off their historical lows, but stress the importance of credit quality.

We continued moving the portfolio to be more defensive with 99% IG 1% HY vs last month of 90% IG 10% HY. We have added pared down AA and A rated securities and naturally built up AAA rated securities in the portfolio. We added some duration during the month of December to take advantage of falling yields as we've seen inflation expectations fall through key levels.

We continue to look for opportunities across asset classes. As mentioned above, we have moved towards a defensive posture; We are currently not adding to high yield corporates or high yield debt in general. We have added some duration to the portfolios via treasuries and continue to remain nimble in that arena. We also have our eyes on the convertible bond space as we can lock in higher yields as prices have come in. We continue to monitor inflation expectations and key technical levels on the 5-Year and 10-Year US Treasury yield for entry points.

**Definitions:**

**S&P 500:** Standard and Poor's 500 Index is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

**Basis Point ("bps"):** one hundredth of one percent, used chiefly in expressing differences of interest rates

**CLOs:** Collateralized loan obligations (CLOs) are a form of securitization where payments from multiple middle sized and large business loans are pooled together and passed on to different classes of owners in various tranches. A CLO is a type of collateralized debt obligation.

## PORTFOLIO ALLOCATIONS\*

|                  |        |
|------------------|--------|
| Investment Grade | 98.88% |
| High Yield       | 1.12%  |

## CREDIT QUALITY\*\*\*

|      |        |
|------|--------|
| Cash | 12.39% |
| AAA  | 79.07% |
| AA   | 3.05%  |
| A    | 3.74%  |
| BBB  | 0.63%  |

\*The share classes have different sales charges, fees and other features. Returns with sales charge reflect the deduction of current maximum initial sales charge of 1.5% for A shares and applicable contingent deferred sales charges (CDSC) for C shares of 1%.

Performance is annualized trailing returns as of 12/31/2018 for the Leader Short Duration Bond Fund for all Share Classes (ticker symbols: LCCIX, LCCMX, LCAMX & LCMCX); LCCIX & LCCMX are not subject to sales loads, however, LCAMX & LCMCX might be subject to a sales load. More information about fees and expense levels can be found in the Fund's prospectus.

**Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. Share prices and investment returns fluctuate and investor shares may be worth more or less than original cost upon redemption. To obtain performance as of the most recent month end, please call 1-800-269-8810.**

**Important Risks:** Bonds offer a relatively stable level of income, although bond prices will fluctuate providing the potential for principal gain or loss. Intermediate-term, higher quality bonds generally offer less risk than longer term bonds and a lower rate of return. Generally, a fund's fixed income securities will decrease in value if interest rates rise and vice versa.

Mortgage-backed investments involve risk of loss due to prepayments and, like any bond, due to default. Because the sensitivity of mortgage-related securities to changes in interest rates, a fund's performance may be more volatile than if it did not hold these securities.

Foreign Investments can be riskier than U.S. investments. Potential risks include currency risk that may result from unfavorable exchange rates, liquidity risk if decreased demand for a security makes it difficult to sell at a desired price, and risks that stem from substantially lower trading volume on foreign markets. These risks are generally greater for investments in emerging markets, which are also subject to greater price volatility, and custodial and regulatory risks.

**Current Yield** is the weighted average of the annual rate of return based on price. It is calculated by the coupon divided by the price. **Average Yield-to-Worst** is the weighted average of the percentage rate of return if the security is held to earliest call date/maturity/redemption.

The Bank of America Merrill Lynch 1-3 Year U.S. Corporate and Government Index tracks the performance of US dollar denominated investment grade debt publicly issued in the US domestic market, including US Treasury, US agency, foreign government, supranational and corporate securities with remaining term to final maturity less than 3 years. This is the Fund's benchmark. You cannot invest directly in an index.
