A high-quality bond fund that gives investors exposure across multiple fixed income sectors, a focus on high credit quality, and low duration.

Launched in 2016, Leader High Quality Low Duration Bond Fund is focused on maintaining superior portfolio credit quality. The Fund is actively managed for strong risk adjusted returns, high portfolio credit quality, minimal interest rate sensitivity and ability to invest across fixed income sectors.

High Credit Quality: The Fund invests in A or better rated securities only. We view our high-quality mandate is crucial to reducing volatility and vital to being a core fixed income holding.

Diversified Across Asset Classes: Access to a wider range of floating rate securities means the fund may take advantage of dislocations across the market to generate incremental yield.

Low Duration: A bond fund that achieves its low duration mandate through investments in floating rate bonds.

Core Fixed Income Allocation: A fund that can serve as a core fixed income allocation. The fund can be used as an ultrashort bond fund, short term bond fund, and an investment grade floating rate fund. The Fund's low duration and high-quality mandate make this fund a fit for multiple Morningstar fixed income categories and in our view, belongs in every fixed income portfolio as a core allocation.

Hypothetical Growth of \$10,000

This chart assumes an initial investment of \$10,000 made on December 30th, 2016 for the Institutional Share Class. Performance assumes reinvestment of dividends and capital gain distributions. This chart is for illustrative purposes only.

Important Risks: Bonds offer a relatively stable level of income, although bond prices will fluctuate providing the potential for principal gain or loss. Intermediate-term, higher quality bonds generally offer less risk than longer term bonds and a lower rate of return. Generally, a fund's fixed income securities will decrease in value if interest rates rise and vice versa.

As with all mutual funds, there is the risk that you could lose money through your investment in the Fund. Investments in debt securities typically decrease in value when interest rates rise. This risk is actually greater for longer-term debt securities. Investments in asset-backed and mortgage-backed securities include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Collateral Loan Obligations ("CLOs") and collateralized debt obligations ("CDOs") are securities backed by an underlying portfolio of loan and debt obligations and the risks depend largely on the types of those underlying holdings. Investments in foreign securities involve greater volatility and political, economic and currency risks. The fund is exposed to credit risk where lower -rated securities have a higher risk of defaulting on obligations. Investment by the fund in lower-rated and nonrated securities presents a greater risk of loss of principle and interest than higher-rated securities. The Fund is subject to liquidity risk as some securities may have few market-makers and low trading volume, which tends to increase transaction costs and may make it difficult for the Fund to dispose of a security at all or at a price which represents current or fair market value. As a result of its trading strategy, the Fund expects to engage in frequent portfolio transactions that will likely result in higher portfolio turnover and commissions than many investment companies.

Mortgage-backed investments involve risk of loss due to prepayments and, like any bond, due to default. Because the sensitivity of mortgage-related securities to changes in interest rates, a fund's performance may be more volatile than if it did not hold these securities.

Portfolio characteristics represent 100% of the portfolio and will vary over time. Credit qualities are shown as a percentage of net assets. A bond rated BBB or higher is considered investment grade. This chart reflects the highest security rating provided by Standard & Poor's. Ratings and portfolio credit quality will vary over time.

Average Duration is the weighted average of the option adjusted duration of the portfolio. It is a measure of the sensitivity of the portfolio to changes in interest rates. The higher the duration the more sensitive the portfolio is to changes in interest rates. Average Current Yield is the weighted average of the annual rate of return based on price. It is calculated by the coupon divided by the price. The 30-Day SEC Yield is computed under an SEC standardized formula based on net income earned over the past 30 days. The 30-Day unsubsidized SEC Yield does not reflect any fee waivers/reimbursements/limits in effect.

The Barclays Government/Corporate 1 Year Duration Total Return Index tracks the performance of US dollar denominated investment grade debt publicly issued in the US domestic market, including US Treasury, US agency, foreign government, supranational and corporate securities with remaining term to final maturity less than 1 year. This is the Fund's benchmark. You cannot invest directly in an index.
