Past performance is no guarantee of future results.

**About LEADER**

Leader Capital was founded in 1997 and operates out of Portland, OR. Since its founding, the company has strived to create opportunities for investors in every environment.

Visit our website at [leadercapital.com](http://leadercapital.com)

A Total Return Bond Fund that gives investors exposure to high quality **floating rate** assets (A or better).

Launched in 2010, Leader Total Return Fund has focused on maximizing total return potential through the ups and downs of bond market cycles.

We recently converted our portfolio to floating rate assets.

**Opportunistic Approach:** The Fund's experienced managers look for strategic entry points across asset classes and single securities.

**Safety of assets.** Most floating rate funds invest in junk bonds. We are the only floating rate fund that mandates A or better credit quality.

Other	1.77%
Cash	4.15%

**Important Risks:** Bonds offer a relatively stable level of income, although bond prices will fluctuate providing the potential for principal gain or loss. Intermediate-term, higher quality bonds generally offer less risk than longer term bonds and a lower rate of return. Generally, a fund's fixed income securities will decrease in value if interest rates rise and vice versa.

Mortgage-backed investments involve risk of loss due to prepayments and, like any bond, due to default. Because the sensitivity of mortgage-related securities to changes in interest rates, a fund's performance may be more volatile than if it did not hold these securities.

Foreign Investments can be riskier than U.S. investments. Potential risks include currency risk that may result from unfavorable exchange rates, liquidity risk if decreased demand for a security makes it difficult to sell at a desired price, and risks that stem from substantially lower trading volume on foreign markets. These risks are generally greater for investments in emerging markets, which are also subject to greater price volatility, and custodial and regulatory risks.

The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figure associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period has the greatest impact because it is included in all three rating periods. Morningstar Rating is for the Service share class only; other classes may have different performance characteristics.

**Current Yield** is the weighted average of the annual rate of return based on price. It is calculated by the coupon divided by the price. **Average Yield-to-Maturity** is the weighted average of the percentage rate of return if the security is held to maturity.
